

ADOPT ME!

Overview

With an increasing number of households owning pets, wandering animals have become an issue. Because individuals may abandon their pets for a variety of reasons, including relocation and health concerns. At the same time, many caring individuals are looking for alternatives to purchasing a pet from a pet store. From our perspective, pet adoption is the most pressing issue for community safety and animal protection organizations. As a result, our team is prepared to introduce the Adopt me in order to address one of our animal lover community's most pressing concerns.

Goals and Objective

The Adopt Me aims are to collect stray animal information from many sources and transport it to our own-built refuge. We will create an effective system that will link the pet hospital, pet store, and applicants who are looking to adopt a pet.

Functionality and Proposed Entities

Our project's key capabilities include offering an adoption platform for pet enthusiasts and those who are no longer able to retain a pet. This effective adoption match mechanism will help foster relationships with the hospital and pet store.

Administrator, Applicant, Hospital, and Pet Store are the four key users required to accomplish complete operation of our product. The following are the users' job responsibilities:

- The Administrator is in charge of registering them and delivering thorough information to them. They will also examine and review the information given by the adoption applicant. Furthermore, the Administrator is in responsibility of verifying applicants' qualifications and, if required, conducting an in-person survey.
- The Applicant will create an account using actual details. They may choose their preferred pet from our system and schedule a visit to our shelter to meet the exact pet.
- In response to a request from our shelter, the Hospital will provide an overall health check, medical help, and a vaccine. They will ensure that all of the animals at our shelter are adoptable. Furthermore, upon adoption, our customer might seek the following medical care from the hospital.
- Pet Store is a crucial collaborator. We must ensure that all animals in our shelter are well nourished, therefore we will submit a request to a pet store for enough food, toys, and daily consumption. It will also provide our clients with the best diet and medications, as well as hospital suggestions and prescriptions.
